

SUITABLE FOR  
**ALL  
BAR**  
MATERIALS

## Safe transport of Guide rails up to 155 kg

### Example: Handling bar material floatedly!

For the load-free movement of bar material, STRÖDTER company offers market special standardised gripper systems. For heavy and long guide rails up to 155 kg, we rely on this combination:

- STRÖDTER | ROLLYXPLUS+ rail system
  - STRÖDTER | TELO-MAT FE 200 for handling of linear guides with several profile variants.
- With a magnetic traverse for linear guides, with stops for easy positioning on the linear guides, an electric chain hoist control with an automatic set-down switch-off.

The operation (see reverse side) for the worker is simply solved. He can move a large quantity of bar material per day because of the upright, ergonomic position, he can carry out the work process permanently without feeling a load. Interested?

You can reach us daily from Monday to Thursday from 07.30 -16.30 and Fridays from 07.30-14.00
